Franchise Opportunity – Client 5038

Individual or Multi-location Franchisees are Welcome

NOTE: WE DON'T OFTEN INTRODUCE FRANCHISES – THIS ONE IS WORTH CONSIDERING!

What is it? *Electrical Muscle Stimulation (EMS) based fitness is the latest, hottest, and safest new form of full-body training in the US. EMS is FDA approved, uses electrical stimulation technology to engage all major muscles to deliver a full-body workout in only 20 minutes. It is low-to-no impact that is used by elite athletes (Usain Bolt, Federer, Nadal, etc.) to Parkinson's patients - its client-base and versatility is boundless. Equivalent to 2.5 hours of training in a conventional gym, it is one of the most efficient fitness trainings. Electrical Stimulation fitness concept is well proven across the world – it is well-researched and ripe for explosive growth in the US.*

Opportunity. The concept has been widely accepted in Europe for decades. Only recently has it been introduced in the United States. ***This is a ground floor opportunity.***

Equipment. The machines are easy to learn to use, have a long life, and have been proven for decades.

Personnel. Certified Trainers manage and conduct Member training. A Franchisee DOES NOT need to be a Certified Trainer.

Facility. The size and cost, like any facility, depends on the size and market. The Franchisor provides location assistance.

Competition. At this time there is nothing comparable in most of the Midwest USA.

Financial. It's approved for SBA Loans. Franchisees must demonstrate funds available for the down payment, Working Capital, and a reserve to cover living expenses during the start-up phase.

NOTE: WE ARE NOT SELLING A FRANCHISE; WE ARE INTRODUCING AN OPPORTUNITY!

If interested or just curious, please contact us. It's a unique opportunity.
